

READ ME: <https://github.com/radical-project/radical.dreamer/blob/master/README.md>

CHANGES FROM README:

1. Requirements
 - a. Python 3.6 and higher with the following libraries:
 - i. install miniconda, and then you can create any envs with any python (that would be like conda create -n test-dreamer python=3.7)
 - b. radical.utils 1.4.1 and higher (temporary should be used a branch that is under development:
pip install git+https://github.com/radical-cybertools/radical.utils.git@feature/config_inheritance
 - c. Install dreamer:
pip install git+https://github.com/radical-project/radical.dreamer.git
 - d. numpy
 - e. pika
 - f. RabbitMQ
2. git clone <https://github.com/radical-project/radical.dreamer.git>
3. **In the config file under radical.dreamer/examples/config_data.json use my credentials for RMQ**

Under Rabbit_mq URL:

Replace: "url": "amqp://localhost:5672/",

With

"url": "amqp://krb09:yZtTe9FXyhXKxzKC@129.114.17.185:5672",

4. Follow the readme to run the example.
